

godzillion.io

Decentralized Crowdfunding Application

We have implemented and are operating a purely decentralized application as a Smart Contract Architecture, that operates on the Ethereum Virtual Machine as a (global) primary and secondary Startups Tokens market place.

What it does:

Godzillion is bringing to investors a fully new way to invest in Alternative Assets: Seeds, Startups and Small Companies Accessing in one user-friendly place a large number of opportunities for investing

- With screening by a pre-qualifying voting system for filtering suitable opportunities
- With a very cost- and time-effective way to select and acquire shares in a primary market
- With total freedom to disinvest in a secondary market
- With total flexibility to exchange Tokens vs. multiple cryptocurrencies (Including ETH and GODZ)
- Benefiting from the security and compliance of the most advanced technology: The decentralized encrypted Ethereum Blockchain.

Seeds, Startups and Small Companies have in Godzillion a new way of accessing funds:

- Leveraging the same user-friendly and fully secured platform that investors can trust
- Saving also a lot of time and money
- Avoiding the pressure to deliver short-term dividends

Why the Godzillion Dapp:

- Investors can Vote on Startups and rewards for it
- It facilitates the diversification of portfolio investment for Alternative Assets
- Provide a perfect solution for asset liquidity
- Operate in a real-time and cost-effective way
- Use state-of-the-art technology for security and compliance purpose

Welcome to Godzillion, the new Ethereum Blockchain primary and secondary market for Seeds, Startups and Small Companies!
